

Amendments to the Specification:

Please amend the paragraph beginning at page 6, line 31 to read as follows:

Yet another problem relates to the fact that updated versions of individual layers may be formed from ~~form~~ time to time during the course of the production life of a given disc title. Such updated versions may be generated to provide altered program area contents for a given layer (e.g., the addition of additional features, the correction of noted errors, etc.). Such updated versions may also relate to a remastering of a particular layer to form a new generation of stampers, etc. At present, there is generally no effective way to track whether a given set of layers belongs together, and to readily identify the status (including revision level) of the various individual layers in a given disc.
